1982 FIRE SITUATION

STATE OF IDAHO:

The 1982 fire season will be remembered as one of the quietest on record across the Boise Fire Weather District. Extraordinary winter snows; above average rainfall in the late spring/early summer and again in September; as well as the lack of any extended hot dry periods combined to produce a fire season without a project fire.

The winter of 1981-1982 was distinguished by well above average snowfall, particularly in the mountains of Idaho, the above normal precipitation continued into the spring at most locations.

The month of June began with a deep low pressure system along the west coast. This weather pattern persisted through the first half of the month. Dry and mild weather then prevailed for the most part until another persistent trough developed toward the end of the month.

In July, very wet weather was the rule for the first part of the month with low pressure persisting off the west coast. A dry ridge of high pressure built over the district between the 10th and 13th but another trough pushed over the district during the middle of the month. Circulation around a persistent high pressure system centered over the four-corners area brought copious amounts of moisture to the eastern portion of the district for the last few days of July. Virtually all stations across the district reported well above normal rainfall for the month.

August was the driest month of the season at most stations. High pressure over the desert southwest was the dominant weather feature as the polar jet stream finally pulled northward into Canada. While temperatures were warm and precipitation was on the light side—fire danger did not jump into the very high to extreme category. This was apparently due to the high moisture content of the lower levels of the atmosphere and the resulting unusually high relative humidity.

September began with a dry high pressure ridge over the district. The first 10 days of the month were essentially free of precipitation but a strong cold front swept across the district and a very cold low pressure system developed on the 12th and 13th, snow fell over parts of the region. Tropical moisture pushed northward into the district during the last 10 days of the month bringing widespread heavy rains. Snow was again reported.

Unsettled weather was the rule for the first 10 days of October. Precipitation was spotty and snow fell at the higher elevations. The month ended on a stormy note with widespread precipitation occurring over the district during the last week.

STATE OF NEVADA:

During the first half of April a series of storms moving inland from the Pacific dropped heavy precipitation over the Sierra Nevada. The second half of the month was dry statewide.

The weather during May showed a shift in activity to the east and south while the west enjoyed mild weather. Storms tended to dump more precipitation over the eastern half of the state. Toward the end of the month though, summer was beginning to make itself felt as temperatures neared 100 degrees.

Throughout the month of June the Nevada weather was dominated by periodic and occasionally persistent low pressure systems. As the lows developed and then moved east the heaviest precipitation was confined to the north while the south received mostly trace amounts to less than .2 of an inch. Showers and thunderstorms produced some locally heavy rains from the Sierra east.

A strong high pressure system developed in the four-corners area and was the dominant synoptic feature for Nevada during July with an occasional weak trough of low pressure passing across the north.

Although Nevada's official precipitation measuring stations had generally below normal amounts of rain for August, there were a substantial number of very strong thunderstorms. Most of the thunderstorms occurred over the central, east, and south and a number of roads were washed out or covered with mud and debris. Reports in the extreme south indicated between three to five inches of rain for the month, along with hail up to five-eights inch diameter.

September produced above normal precipitation and slightly below normal temperatures.

The first half of October was generally dry but by the end of the month precipitation was above normal and average temperatures were slightly below normal.

STATE OF UTAH:

The Utah fire weather season can be described as the slowest on record due to considerable rainfall over Utah forests. No mobile unit service was necessary to land management agencies, due to heavy rains with snow accumulations of several feet above 6,000-foot elevations.

September was the wettest September as well as the wettest month on record for the Salt Lake airport with a little over seven inches of rain. The Wasatch Front bench areas received almost nine inches of rain during the same period. One to two feet of snow was also reported in the mountains.

LARGE FIRE OCCURRENCE

There were 7 Class D or larger fires that burned in 1982. These 7 fires accounted for 98 percent of the total area burned.

ATTAINMENT

In 1982, 96 percent of all fires were controlled at 10 acres or less in size on 33 million acres of Forest Service protected lands. Less than 1 percent of the fires burned 100 or more acres each.

PERSONNEL EMPLOYED ON FIRE MANAGEMENT ACTIVITIES 1982

CATEGORY	NUMBER		
	%	SUB-TOTAL	TOTAL
1. Regular appointed personnel			
a. Full-time fire protection	5	89	
b. Others used on fire protection	8	152	
c. Others used on presuppression	6	100	
d. Others used on suppression	16	293	
	35		634
2. Seasonal or short-term personnel			
a. Regular fire protection	25	456	
b. Others some time on fire protection work	20	357	
c. Emergency firefighters	6	105	
	51		918
3. Number of causal employees on fire suppression	14	254	254

5. GRAND TOTAL	100		1,806

USDA-FOREST SERVICE

SMOKEJUMPER AND HELITACK REPORT

CALENDAR YEAR: 1982

REGION: Four

INSTRUCTIONS:

Item 1 - Permanent bases only. Exclude temporary satellite bases.
Item 2 - Planned strength of unit. Do not include non-fire goers.
Item 3b - Exclude fires where initial attack is by jumpers or crewmen.
Item 5 - For smokejumpers report on fires jumped only. For helitack report only on fires where travel is by helicopter. Include travel time to and from fires.

ITEM	SMOKEJUMPERS		HELITACK
	Home Region	From Other Regions	Crewmen
1. Number of bases	1		10
2. Number of jumpers or crewmen	75		83
3. Number of fires attacked or jumped			
a. Initial attack	22	2	183
b. Follow-up	12	0	82
c. Total	34	2	265
4. Number of man-jumps to fires	185	16	0
5. Man-days on fires	546	14	845

Remarks *(Use for explanatory notes, if necessary)*

The McCall smokejumpers made an additional 127 man-jumps to 57 fires while detailed to other bases.

5100-7 (Rev. 1/66)

COOPERATIVE EFFORTS

Interagency cooperation continues to be emphasized in the Region. Some examples of these cooperative efforts between Forest Service units, states, counties, and other federal agencies are:

The Uintah Basin Coop-Agencies agreements continue to be working well. These agencies include:

1. BIA Uinta/Ouray Indian Agency
2. BLM Vernal District
3. NPS Dinosaur National Park
4. State of Utah
5. Ashley National Forest

This year we had a cooperative effort between BLM, Bridger-Teton National Forest, and Teton National Park in supporting one helicopter. This more than doubled the response area for the helicopter.

The Challis National Forest and the Salmon BLM entered into an agreement whereby the Challis provided initial attack for all BLM lands in the Pahsimeroi, Challis, East Fork, and Mackay Corridors. Cooperation was excellent.

The Interagency Dispatch Office located in Cedar City, Utah, continues to operate smoothly giving advantages in both savings to government and no lost time in waiting for detailers to arrive to help in overload situations. Agencies included in this center are:

1. National Park Service
2. Cedar City BLM District
3. Dixie National Forest

1982 marked the 5th consecutive year that the Fishlake National Forest has cooperated successfully in the operation of the Richfield Interagency Fire Dispatch Office with the Richfield District of the Bureau of Land Management. The dispatch office has enabled the two agencies to effectively work together on a number of wildfires.

The Fishlake National Forest cooperated with the Utah Division of State Lands and Forestry on an initial attack offset agreement in Sevier County.

The Nevada Division of Forestry and the Humboldt National Forest initial attack agreement continues to operate very well.

The Payette National Forest provided presuppression and suppression resources (smokejumpers, air tankers, crews, fire equipment, and overhead) to 14 National Forests in 4 different Regions, 4 BLM Districts including the Alaska BLM, the Yukon Territory in Canada, the States of Idaho, Oregon, Washington, and New Mexico, and the Southern Idaho Timber Protective Association (SITPA).

The Salmon National Forest and the Salmon BLM District consolidated their dispatch organizations into one interagency dispatch center in April, 1982. Excellent cooperation has been experienced.

The cooperation between the Shoshone BLM District, the Burley BLM District, and the Sawooth National Forest continues to be excellent with a close working relationship and strong commitment to assistance.

The West Yellowstone Interagency center has been extremely helpful and made every effort to provide excellent service. The National Park Service, BLM, and Forest Service (Region's 1 and 4) are involved in this operation.

Interagency cooperation continues to increase in effectiveness among the Toiyabe National Forest, Nevada Division of Forestry, California and Nevada BLM Offices, and the Reno Fire Weather Office. The Minden Tanker Base, the Interagency Dispatch Center, and the Coop Agreement along the Carson Range of the Sierra Front are examples of this effort.

The Utah Interagency Fire Center located in Salt Lake City continued cooperative operations during the 1982 season. The Fire Center directly or indirectly supported 172 interagency wildland fires. Agencies included in this center are:

1. National Weather Service
2. State of Utah
3. Utah BLM
4. Uinta National Forest
5. Wasatch National Forest

Region's 4 and 6 working agreement whereby the class one overhead teams are rotated on a weekly basis and dispatched to fires within both regions continues to work out extremely well.
